# Topic

## Data:

**This dataset, from the Urban Social Disorder Global Dataset, analyzes the impact of urbanization on global populations.**

- covers 186 national capitals & urban centers from 1960 to 2014
- details social disorder events, both violent and non-violent

## Key Variables:

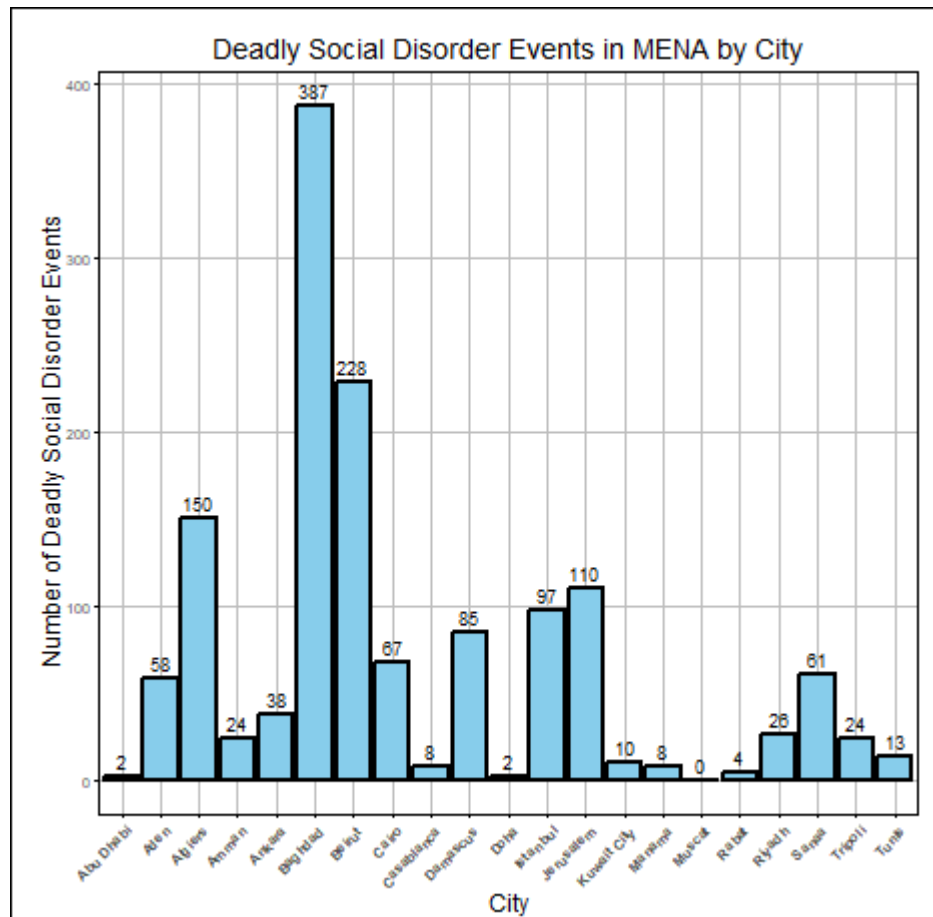

- DEATHEVENTS: social disorder events within a city which result in at least one death between 1960 and 2014
- NEVENTS: social disorder events within a city between 1960 and 2014

## Reason this dataset is important:

- helps to understand if certain regions are more prone to experiencing violent social disorder outbreaks; essential for implementing mitigation

# Analysis 1.

This visual analysis examines the relationship between DEATHEVENTS and city in the Middle East and North Africa (MENA)

# Analysis 2

**Impact of number of events on the number of deadly events in North Africa and Latin America**
